Dustin Butterworth

Cumming, US dustin.butterworth@protonmail.com
https://www.dustinbutterworth.com/

Senior Security Engineer focused on cloud security, detection engineering, and AI application security. Experienced securing AWS and Azure environments alongside Microsoft identity and platform controls. Builds policies, tooling, and automation in Python, Bash, and PowerShell, partnering across AppSec, SecOps, and architecture to raise security posture with minimal supervision.

Education

Western Kentucky University *May 2004*

Bachelor in Sociology and Criminology

Experience

Senior Security Engineer *May 2024 — Present*

GreenSky

Driving cloud posture, detection engineering, identity/platform controls, and AI application security to support GreenSky's security and AI-forward initiatives

- Improve AWS cloud security posture with Prisma Cloud CNAPP and lead migration to Cortex Cloud for AWS, Azure, and Entra coverage
- Detection engineering for SecOps: author custom Microsoft Defender alerts and cloud security alerting into Google SecOps SIEM
- Roll out security policy and controls for Microsoft Power Platform and engineer Entra Conditional Access policies
- Deployed Obsidian Security SSPM to strengthen SaaS security posture management
- Serve on the Architectural Review Board performing security reviews for new projects, assessing AI initiatives against the OWASP Top 10 for LLM Applications and MITRE ATLAS
- Through the AI Center of Excellence: reviewed and secured the Claude Enterprise environment to security best practices, authored AI usage policy and procedures, and drove adoption of an LLM/MCP gateway now being implemented
- Built a log poller to ingest Claude Enterprise compliance logs into Splunk
- Built the Claude Harness for the security team via a GitLab-based Claude Marketplace for incident response and daily workflows; presented it to the board to demonstrate impact and improved MTTR
- Perform AI red teaming with promptfoo against AWS Bedrock applications
- Help develop Amazon Bedrock Guardrails for AI applications

Cyber Threat Intelligence Team Lead *July 2021 — May 2024*

OneTrust

Founded the cyber threat intelligence program while delivering scalable security automation and engineering

- Architected serverless solutions for security automation
- Developed security infrastructure as code with Terraform
- Led the email security engineering initiative
- Automated security tasks and procedures across multiple teams
- Supported incident response across engineering and security teams

Security Engineer *September 2018 — July 2021*

GreenSky

Delivered scalable security engineering, automation, and container security in CI/CD to support the company's mission

- Coordinated vulnerability management across the organization

- Automated recurring security tasks to reduce manual effort
- Pioneered the shift-left security movement at GreenSky
- Integrated container security into the CI/CD pipeline
- Performed security assessments of cloud applications (Fargate, Lambda, API Gateway, KMS)

DevOps Team Lead *November 2016 — September 2018*

GreenSky

Led DevOps initiatives, delivery, and Infrastructure as Code to improve operational efficiency

- Managed projects and delivery work in Jira
- Coached and trained team members on DevOps practices
- Owned production deployments and troubleshooting
- Established Infrastructure as Code across the application stack
- Moved Keycloak from standalone to high availability

Skills

Automation and Scripting: Python, Bash, PowerShell

Cloud and Identity: AWS, Azure, Entra, Bedrock, Power Platform

Security Tooling: Prisma Cloud, Cortex Cloud, Obsidian SSPM, Microsoft Defender, Google SecOps, Splunk, CrowdStrike, promptfoo, OWASP LLM Top 10, MITRE ATLAS

DevOps / Platform: Terraform, Ansible, GitLab, CDK/CloudFormation

Interests

Professional affiliations: InfraGard
